

Risk Analysis		
Risk Event	Risk Level	Measures
Missing group members	Low	If a member is missing from a meeting the work should proceed as normal. The missing team member should read the minutes to get informed. Team members that do not show on meetings and do their job will get a warning.
Software Development		
Communication between application and server	Medium / High	Problems may occur with application-server communication. This issue must be tested before the project submitted.
Missing features	Low / Medium	Some features may take more time to implement than expected or a group member may not be able to complete his work. If a group member sees such an issue arising he/she should inform the rest of the group and ask for help.
SQL Injection	Medium / High	There is a risk of SQL injection which may cause problems with the database.
Server downtime	Medium	Group members should be notified about any changes via the group's Facebook group. Members should not change the already approved files until the server is back to normal work.
Running out of time	Medium	In-group deadlines before the actual deadlines to make sure everything will be completed in time.

Poor interface quality	Low / Medium	Information should be displayed clearly and the user should be able to navigate easily.
Git Desynchronisation	Low / Medium	All the group members should make sure that they correctly upload all of their work in order to avoid desynchronisation.
Documentation		
Late submission of the documentation	Low	In-group deadlines before the actual deadlines to make sure that all the documentation is appropriate and with good quality. If any problems occur and the group member cannot finish his work by the deadline he should inform the group in order to get help with his task.
Low quality of the documentation	Low	The documentation should be checked by the group and in case of low quality should be returned to the group member for improvements. The group member should ask for help from the group if needed.
